

M-Path

Sprint 2

Project Progress and Features

Craftsman tools

- ☒ Screwdriver
- ☒ Saw
- ☒ Hammer
- ☒ Cable cutter
- ☒ Sandpaper
- ☒ Diagonal p
- ☒ Linesman
- ☒ Long
- ☒ Me
- ☒ 7
- ☒ 8

Furniture list

- ☒ Bedroom
- ☒ King size bed
- ☒ Headboard
- ☒ Drawer
- ☒ Built in closet
- ☒ Mattress
- ☒ Lamps x 2
- ☒ Timorad
- ☒ 9:30 am

- ☒ Living room
- ☒ Sofa
- ☒ Coffee table
- ☒ Television set
- ☒ Stools x 4
- ☒ Book-shelf

Kitchen

- ☒ Dining table
- ☒ Chairs x 6
- ☒ Cupboard
- ☒ Kitchen island
- ☒ Food pantry
- ☒ Stove & oven
- ☒ Sideboard
- ☒ Refrigerator

Will be delivered on 6th Apr

- ☒ Bathroom
- ☒ Storage
- ☒ Toilet

Room plan

1st floor

Features Added

1. Milestone added to goals and calculated for weekly summary
2. Goals list properly functional with varying categories and swipe to delete
3. Charities form and list created and connected to database
4. Advertising page and Skip button implemented
5. Databases setup. Supabase for our server (charities) and a small sqlite db for the user (goals and milestones)

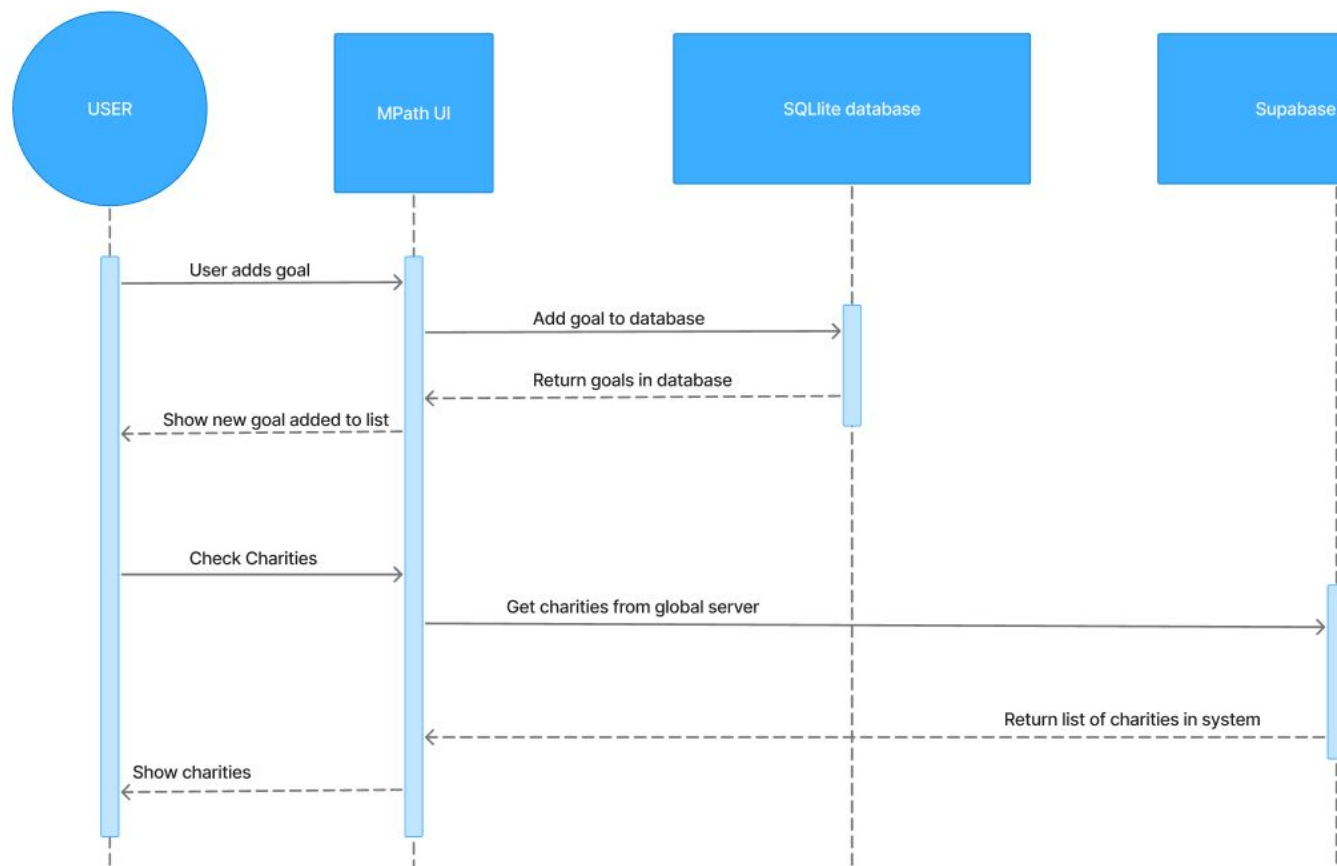

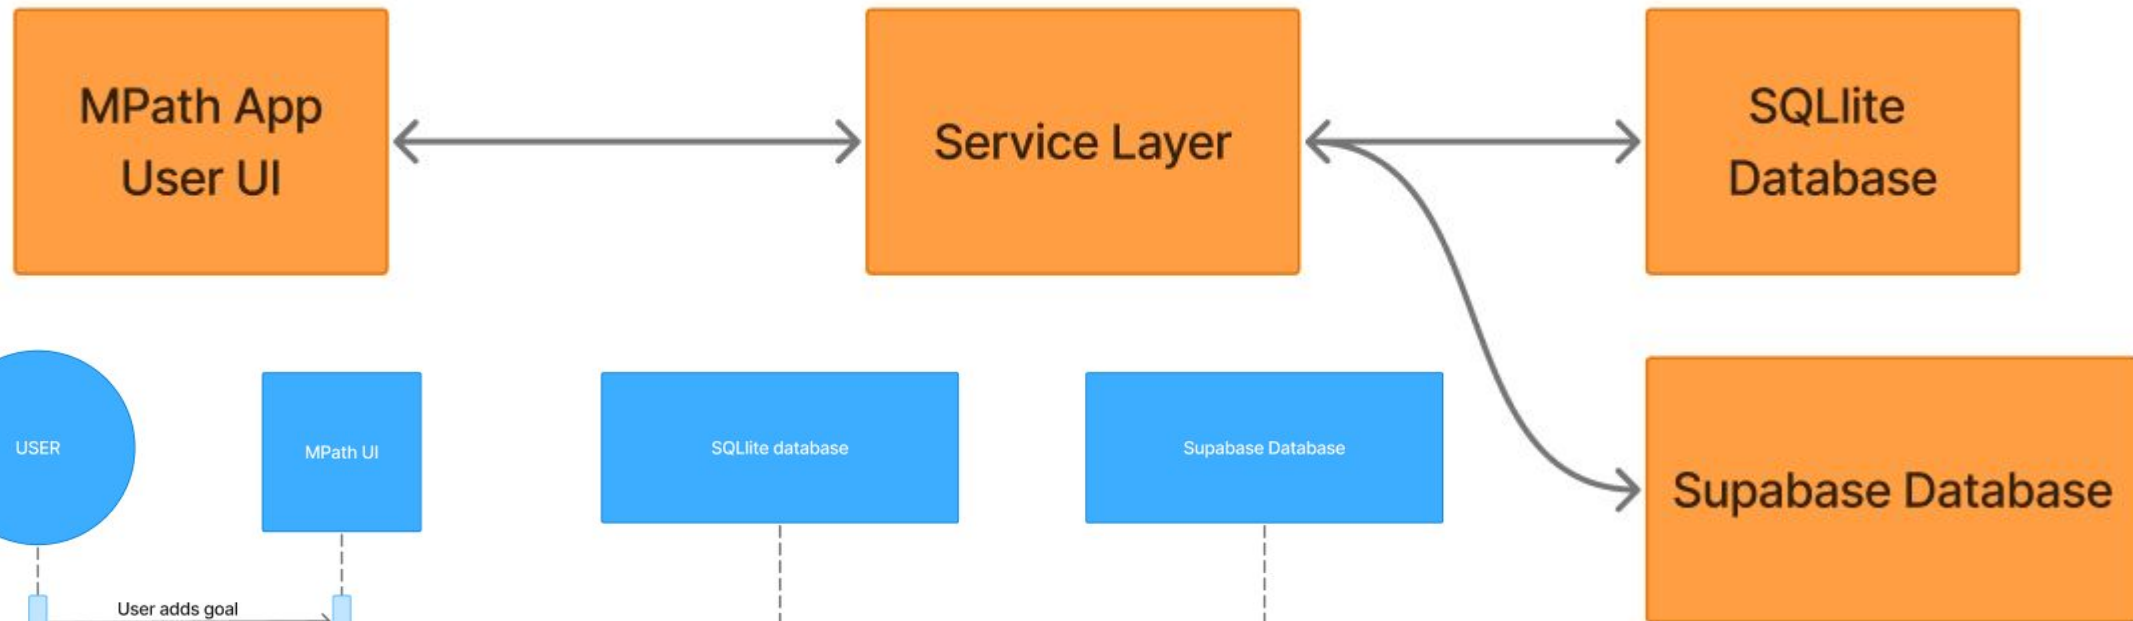

Architectural Choices

Client-Server with a Data layer

- We decided the users personal goal and milestone data should stay on their own devices for privacy and ease of access, but realized there was some information, like charity-related functions, that would have to come from our main server. For this reason the project uses a client-server architecture, with a small Sqlite for each client and Supabase for the server.
- A data layer was introduced to separate the databases and logic from the UI, which helped separate concerns and make working with multiple databases more straightforward.

THANK YOU FOR YOUR TIME!

Give us an A!!
